We usually get along best with people who we think are like us. In fact, we seek them out. It's why places like Little Italy, Chinatown, and Koreatown exist. But I'm not just talking about race, skin color, or religion. I'm talking about people who share our values and look at the world the same way we ① do. As the saying goes, birds of a feather flock together. This is a very common human tendency ② what is rooted in how our species developed. Imagine you are walking out in a forest. You would be ③ conditioned to avoid something unfamiliar or foreign because there is a high likelihood that it would be ④ interested in killing you. Similarities make us ⑤ relate better to other people because we think they'll understand us on a deeper level than other people.

** species: 종(생물 분류의 기초 단위) ** likelihood: 가능성*

You may have seen headlines in the news about some of the things machines powered by artificial intelligence can do. However, if you were to consider all the tasks ⓐ that AI-powered machines could actually perform, it would be quite mind-blowing! One of the key features of artificial intelligence ⓑ is that it enables machines to learn new things, rather than requiring programming specific to new tasks. Therefore, the core difference between computers of the future and ⓒ those of the past is that future computers will be able to learn and self-improve. In the near future, smart virtual assistants will know more about you than your closest friends and family members ⓓ are. Can you imagine how that might change our lives? These kinds of changes are exactly why it is so important ⓔ recognizing the implications that new technologies will have for our world.

** mind-blowing: 놀라운 ** implication: 영향, 함의*

① ⓓ, ⓔ ② ⓐ, ⓓ, ⓔ ③ ⓑ, ⓒ ④ ⓐ, ⓑ, ⓒ ⑤ ⓑ, ⓓ

The brain makes up just two percent of our body weight but uses 20 percent of our energy. In newborns, it's no less than 65 percent. That's partly why babies sleep all the time—their growing brains ① exhaust them—and have a lot of body fat, to use as an energy ② reserve when needed. Our muscles use even more of our energy, about a quarter of the total, but we have a lot of muscle. Actually, per unit of matter, the brain uses by far ③ more energy than our other organs. That means that the brain is the most ④ expensive of our organs. But it is also marvelously ⑤ wasteful. Our brains require only about four hundred calories of energy a day—about the same as we get from a blueberry muffin. Try running your laptop for twenty-four hours on a muffin and see how far you get.

** reserve: 비축, 예비 ** organ: 기관*

Hunting can explain how humans developed reciprocal altruism and social exchange. Humans seem to be unique among primates in showing extensive reciprocal relationships that can last years, decades, or a lifetime. Meat from a large game animal comes in quantities that ① exceed what a single hunter and his immediate family could possibly consume. Furthermore, hunting success is highly ② variable; a hunter who is successful one week might fail the next. These conditions encourage food sharing from hunting. The costs to a hunter of giving away meat he cannot eat immediately are ③ high because he cannot consume all the meat himself and leftovers will soon spoil. The benefits can be ④ large, however, when those who are given his food return the generous favor later on when he has failed to get food for himself. In essence, hunters can ⑤ store extra meat in the bodies of their friends and neighbors.

** reciprocal altruism: 상호 이타주의 ** primate: 영장류*

When a child is upset, the easiest and quickest way to calm them down is to give them food. This acts as a distraction from the feelings they are having, gives them something to do with their hands and mouth and shifts their attention from whatever was upsetting them. If the food chosen is also seen as a treat such as sweets or a biscuit, then the child will feel 'treated' and happier. In the shorter term using food like this is effective. But in the longer term it can be harmful as we quickly learn that food is a good way to _____. Then as we go through life, whenever we feel annoyed, anxious or even just bored, we turn to food to make ourselves feel better.

** distraction: 주의를 돌리는 것 ** treat: 특별한 선물*

① reward effort
② manage emotions
③ build friendships
④ sharpen focus
⑤ celebrate success

In a study at Princeton University in 1992, research scientists looked at two different groups of mice. One group was made intellectually superior by modifying the gene for the glutamate receptor. Glutamate is a brain chemical that is necessary in learning. The other group was genetically manipulated to be intellectually inferior, also done by modifying the gene for the glutamate receptor. The smart mice were then raised in standard cages, while the inferior mice were raised in large cages with toys and exercise wheels and with lots of social interaction. At the end of the study, although the intellectually inferior mice were genetically handicapped, they were able to perform just as well as their genetic superiors. This was a real triumph for nurture over nature. Genes are turned on or off _____.

** glutamate: 글루타민산염 ** manipulate: 조작하다*

① depending on the surroundings they meet
② according to the genes inherited from parents
③ only during the earliest stage of life
④ whatever the upbringing
⑤ to make up for a lack of intelligence

> For example, if you rub your hands together quickly, they will get warmer.

Friction is a force between two surfaces that are sliding, or trying to slide, across each other. For example, when you try to push a book along the floor, friction makes this difficult. Friction always works in the direction opposite to the direction in which the object is moving, or trying to move. So, friction always slows a moving object down. (①) The amount of friction depends on the surface materials. (②) The rougher the surface is, the more friction is produced. (③) Friction also produces heat. (④) Friction can be a useful force because it prevents our shoes slipping on the floor when we walk and stops car tires skidding on the road. (⑤) When you walk, friction is caused between the tread on your shoes and the ground, acting to grip the ground and prevent sliding.

** skid: 미끄러지다 ** tread: 접지면, 바닥*

> Even though two variables seem to be related, there may not be a causal relationship.

(A) Hence, when researchers attempt to make causal claims about the relationship between an independent and a dependent variable, they must control for—or rule out—other variables that may be creating a spurious relationship.

(B) In fact, the two variables may merely seem to be associated with each other due to the effect of some third variable. Sociologists call such misleading relationships spurious. A classic example is the apparent association between children's shoe size and reading ability. It seems that as shoe size increases, reading ability improves.

(C) Does this mean that the size of one's feet (independent variable) causes an improvement in reading skills (dependent variable)? Certainly not. This false relationship is caused by a third factor, age, that is related to shoe size as well as reading ability.

** variable: 변인 ** spurious: 허위의, 가짜의*

① (A)-(C)-(B) ② (B)-(A)-(C) ③ (B)-(C)-(A)
④ (C)-(A)-(B) ⑤ (C)-(B)-(A)

Vegetarian eating is moving into the mainstream as more and more young adults say no to meat, poultry, and fish. According to the American Dietetic Association, "appropriately planned vegetarian diets are healthful, are nutritionally adequate, and provide health benefits in the prevention and treatment of certain diseases." But health concerns are not the only reason that young adults give for changing their diets. Some make the choice out of concern for animal rights. When faced with the statistics that show the majority of animals raised as food live in confinement, many teens give up meat to protest those conditions. Others turn to vegetarianism to support the environment. Meat production uses vast amounts of water, land, grain, and energy and creates problems with animal waste and resulting pollution.

** poultry: 가금류(닭 · 오리 · 거위 등) ** confinement: 가둠*

① health risks of poorly planned vegetarian diets for teens
② how meat production harms the natural environment
③ ways to persuade teenagers to eat vegetables
④ why more young people choose to go vegetarian
⑤ the growing influence of teenagers on today's food markets

Have you ever brought up an idea or suggestion to someone and heard them immediately say "No, that won't work."? You may have thought, "He/she didn't even give it a chance. How do they know it won't work?" When you are right about something, you close off the possibility of another viewpoint or opportunity. Being right about something means that "it is the way it is, period." You may be correct. Your particular way of seeing it may be true with the facts. However, considering the other option or the other person's point of view can be beneficial. If you see their side, you will see something new or, at worse, learn something about how the other person looks at life. Why would you think everyone sees and experiences life the way you do? Besides how boring that would be, it would eliminate all new opportunities, ideas, invention, and creativity.

** period: (단호하게) 끝, 그만*

① Say No Quickly: How to Filter Out Bad Ideas
② Facts First: Win Arguments with Evidence
③ Why Most New Ideas Deserve to Be Rejected Early
④ The Boredom of a World Where Everyone Agrees
⑤ The Hidden Cost of Insisting You Are Right

11 Claude Bolling에 관한 다음 글의 내용과 일치하지 않는 것은? [6점]

불일치 · 기본 22년 6월 고1 26번

Pianist, composer, and big band leader, Claude Bolling, was born on April 10, 1930, in Cannes, France, but spent most of his life in Paris. He began studying classical music as a youth. He was introduced to the world of jazz by a schoolmate. Later, Bolling became interested in the music of Fats Waller, one of the most excellent jazz musicians. Bolling became famous as a teenager by winning the Best Piano Player prize at an amateur contest in France. He was also a successful film music composer, writing the music for more than one hundred films. In 1975, he collaborated with flutist Rampal and published Suite for Flute and Jazz Piano Trio, which he became most well-known for. He died in 2020, leaving two sons, David and Alexandre.

** collaborate: 협업하다 ** suite: 모음곡*

① 1930년 프랑스 칸에서 태어났지만 생애 대부분을 파리에서 보냈다.
② Fats Waller를 통해 재즈의 세계를 처음 접했다.
③ 십 대에 아마추어 대회에서 상을 받아 유명해졌다.
④ 백 편 넘는 영화 음악을 썼다.
⑤ 1975년에 플루트 연주자 Rampal과 함께 작품을 발표했다.

함축 · 심화 21년 9월 고1 21번

Nothing is trash by nature. Anthropologist Mary Douglas brings back and analyzes the common saying that dirt is "matter out of place." Dirt is relative, she emphasizes. "Shoes are not dirty in themselves, but it is dirty to place them on the dining-table; food is not dirty in itself, but it is dirty to leave pots and pans in the bedroom, or food all over clothing; similarly, bathroom items in the living room; clothing lying on chairs; outdoor things placed indoors; upstairs things downstairs, and so on." Sorting the dirty from the clean—removing the shoes from the table, putting the dirty clothing in the washing machine—involves systematic ordering and classifying. Eliminating dirt is thus a positive process.

** anthropologist: 인류학자 ** relative: 상대적인*

① something that was useful once but is now worn out
② waste that no one bothers to put back in its place
③ a harmful substance that must be removed
④ an ordinary thing found where it does not belong
⑤ an item whose owner cannot be identified

13 **다음 글의 밑줄 친 ⓐ~ⓔ 중 어법상 틀린 것 3개를 찾아 기호를 쓰고, 바르게 고치시오.** [6점]

서답 · 기본 20년 11월 고1 29번

Each species of animals can detect a different range of odours. No species can detect all the molecules that ⓐ is present in the environment in which it lives—there are some things that we cannot smell but which some other animals can, and vice versa. There are also differences between individuals, relating to the ability to smell an odour, or how ⓑ pleasantly it seems. For example, some people like the taste of coriander—known as cilantro in the USA—while others find ⓒ it soapy and unpleasant. This effect has an underlying genetic component due to differences in the genes ⓓ controlling our sense of smell. Ultimately, the selection of scents detected by a given species, and how that odour is perceived, will depend upon the animal's ecology. The response profile of each species will enable it ⓔ locating sources of smell that are relevant to it and to respond accordingly.

** odour: 냄새 ** coriander: 고수 *** ecology: 생태*

14 **다음 글의 요지를 〈보기〉의 낱말을 모두 사용하여 〈조건〉에 맞게 한 문장으로 쓰시오.** [10점]

서답 · 심화 20년 3월 고1 22번

Practically anything of value requires that we take a risk of failure or being rejected. This is the price we all must pay for achieving the greater rewards lying ahead of us. To take risks means you will succeed sometime but never to take a risk means that you will never succeed. Life is filled with a lot of risks and challenges and if you want to get away from all these, you will be left behind in the race of life. A person who can never take a risk can't learn anything. For example, if you never take the risk to drive a car, you can never learn to drive. If you never take the risk of being rejected, you can never have a friend or partner. Similarly, by not taking the risk of attending an interview, you will never get a job.

** be left behind: 뒤처지다*

〈보기〉
unless / take / the risk / fail / never / achieve / anything / valuable

〈조건〉
1. 〈보기〉의 낱말을 모두 사용할 것(필요하면 어형을 바꾸거나 더 쓸 수 있음)
2. unless를 쓰고 the risk of 뒤에 동명사를 사용할 것
3. 12~14낱말로 쓸 것

실패할 위험을 무릅쓰지 않으면, 당신은 가치 있는 어떤 것도 결코 이루지 못할 것이다.
